

(19.3.3) Primary school is considering that they may spend more time on teaching young students(aged between 5 and 11) technology, such as computers, than on teaching music and art.

Agree

静雯：

1. Using technology tools like computers has become a nessecery skill to deal with basic life stuffs, which means schools should spend more time in teaching. good
2. Teaching techology can lead the kids to be aware of the development of technology and inspire them to explore the technology world, which is meaningful in cultivating the potential technology talents. ok

松群：

1. **Teaching kids technology like computers can help students to better develop their intellectual abilities, rather better than teaching music and art. good**

example: John learnt computer at a very young age, and he never had trouble solving math problems, and the logic thinking ability he acquired in learning of computer benefit him in his whole life

2. **In the Information age, technology has become the foundations of learning, without which we can hardly learn in an efficient way. good**

example: It has become a trend to learn things with technology. My brother John is good at computer. Technology has improved my brother's learning ability tremendously. If he failed to catch up with his teacher in class, the slides uploaded on the internet also provided an opportunity to consolidate.

To relax

(19.3.9) The most important problems of our society can be solved during our lifetime.

Agree

静雯

1. With the improvement of education level, there are more and more expertise and talents in all kinds of feild to help **solve the problem** quickly. good
2. The development of ability of information integration and knowladge sharing accelarate the process of **solving a problem**. 可以写科技发展啊

松群

1. \*With the development of science and technology, our society has been improved vastly and thoroughly, becoming more and more competent to **solve difficult problems**. ( 不要了 )
2. Great investment in education can greatly produce the literate people, who will make great efforts contributing to the society, **addressing important problems**.
3. Rapid information integration and knowledge sharing boost the process of **solving the problem**.

(19.2.24) Some first-year college students do not have good study habits. Some people believe that colleges should provide all of the first-year students with a required course to develop their good study habits. Other people believe that providing this course is unnecessary. What's your opinion and why?

A heated debate trigger among the people, some believing that a required course is necessary for freshman students to develop good study habits, others asserting that the course is not needed. From my point of view, a required course is of great importance for a student going to attend the university. good

A pre-course is needed for freshman student because it can help students get used to the fast pace of the university lives. The course not only inform students that university is the new beginning of learning, but also gently ask students **back to** ( 这个不合适, 又没有走神或做其他事情, 为什么要 back to ? ) their busy studies. After my brother John being admitted

to a top university, he took part in the pre-course about learning ability the university prepared for the freshman students. The assignment at the first day was such a big burden for a high school student that my brother spent almost a whole day finishing it. The course lasted for two month and so did John's stressful life. But spending almost all his vacation taking courses while others playing everywhere, John had gotten used to the fast-pace life the university brought to him. (这到底是什么课程, 讲了什么内容就有这么大的效果? 细节缺失) After his enrollment of univeristy, others was not even capable of catching up the teacher in class, but he found it really relaxing. It was his pre-course that helped ed him adjust to his new life in the college rapidly.

a good study habit would enable students to vastly improve their study efficiency, ~~so it is necessary for students to learn them before their enrollment of univeristy.~~ A good study habit can help students work fewer hours with more cheerful results, saving ~~a~~ plenty of time for them. Still goes on with John's example, 句号 in his two months' course, the teacher asked them to take notes in class and look up information in the school library, which was the basic skills for a university student. Adopting the teacher's suggestions, John could digist the knowledges ~~s~~ in class, and revised them after class by looking over the notebooks. Besides, when some difficult problems blocked his way, he just went into the library, looking for the answers. His efficient learning habits(哪儿来的?) saved his much time from the busy life in the universitiy so that he could then have his time spent on basketball. After a year in the univerisity, he achieved a great academic performance, ranking top of the whole grade. Had not he learnt such great methods, he couldn't had achieved such great academic performances. 还是缺少细节

In a nutshell, I am in favor of the idea that a required course is needed for a freshman student, not only because the course can help student get used to the fast pace life in the university, but also can help student develop good study habits, which can improve students learning ability greatly.
